

🚩 Flag 1 – Install Flutter SDK

Objective: Install the Flutter SDK.

Verify:

```
flutter --version
```

Screenshot:

- The results of the command

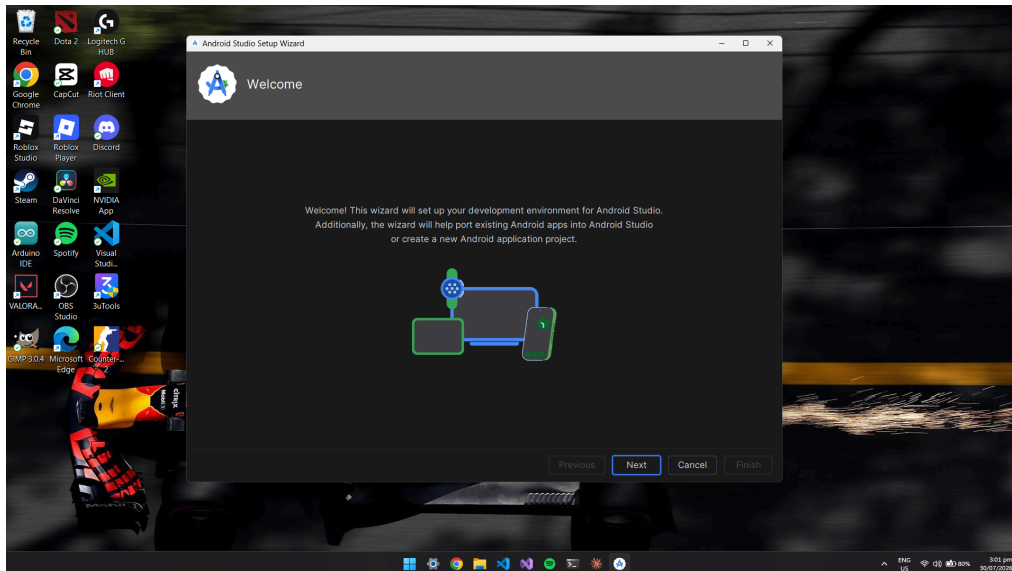

```
PS C:\Users\dominic> flutter --version
Flutter 3.44.8 • channel stable • https://github.com/flutter/flutter.git
Framework • revision 058e0af2c2 (7 days ago) • 2026-07-23 10:56:21 -0700
Engine • hash 13ffd72b2f9a5ca4db2a74ea52d5353ec2e8f939 (revision 0cd610717b) (6 days ago) • 2026-07-23 16:11:34.000Z
Tools • Dart 3.12.2 • DevTools 2.57.0
```

🚩 Flag 2 – Install Android Studio

Objective: Install Android Studio.

Screenshot:

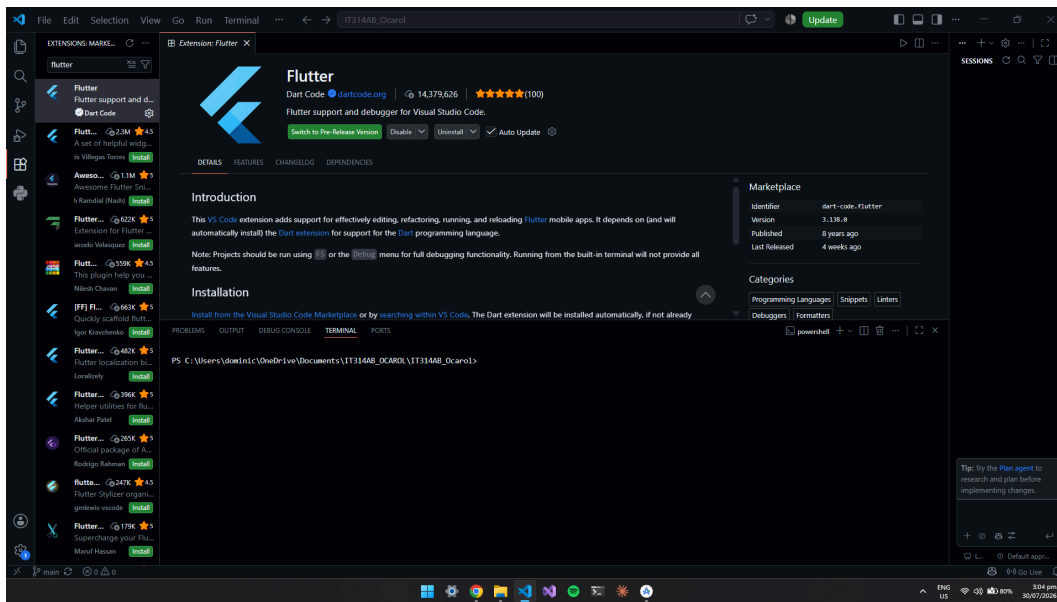

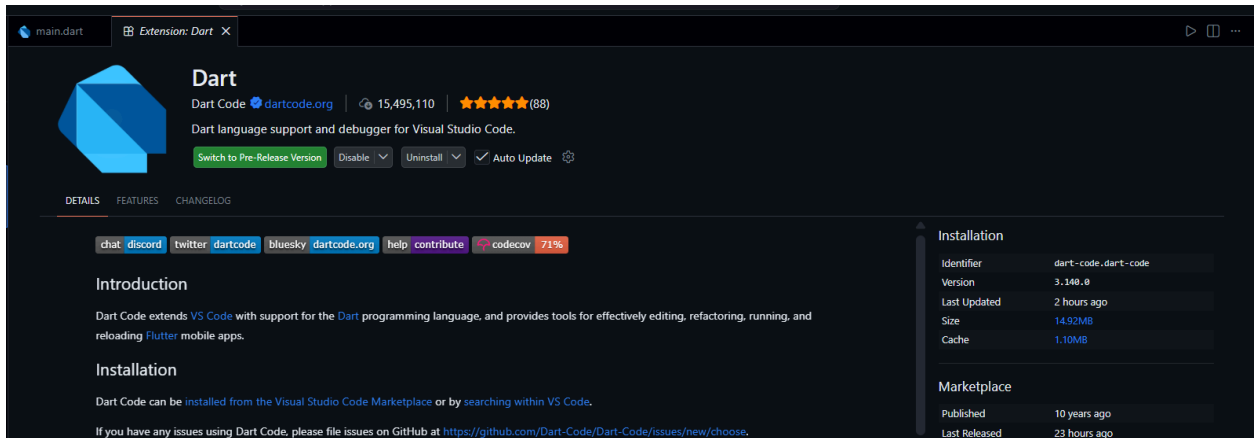

- Android Studio installed
- SDK Manager opened (or Welcome screen)

Objective: Install VS Code and the Flutter (which also installs Dart) extension.

Screenshot:

- Flutter extension installed
- Dart extension installed (or shown as installed)

Flag 4 – Run Flutter Doctor

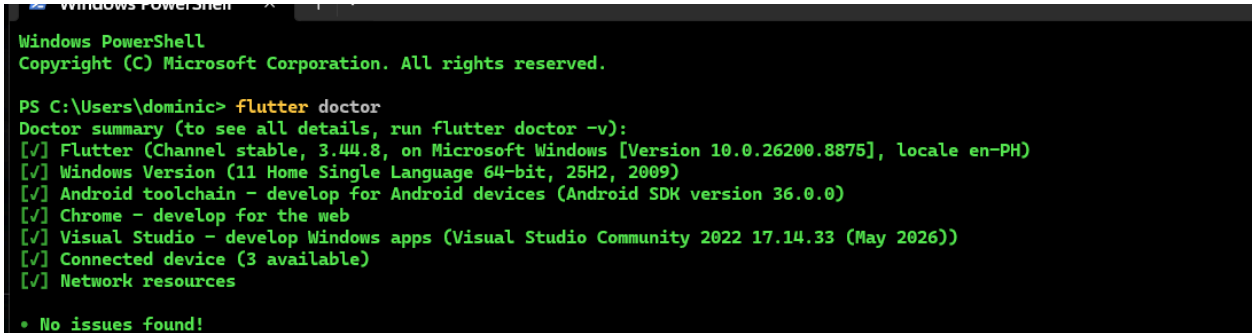

Objective: Check whether everything is configured correctly.

Run:

flutter doctor

Screenshot:

- flutter doctor results

```
Windows PowerShell
Copyright (C) Microsoft Corporation. All rights reserved.

PS C:\Users\dominic> flutter doctor
Doctor summary (to see all details, run flutter doctor -v):
[✓] Flutter (Channel stable, 3.44.8, on Microsoft Windows [Version 10.0.26200.8875], locale en-PH)
[✓] Windows Version (11 Home Single Language 64-bit, 25H2, 2009)
[✓] Android toolchain - develop for Android devices (Android SDK version 36.0.0)
[✓] Chrome - develop for the web
[✓] Visual Studio - develop Windows apps (Visual Studio Community 2022 17.14.33 (May 2026))
[✓] Connected device (3 available)
[✓] Network resources

• No issues found!
```

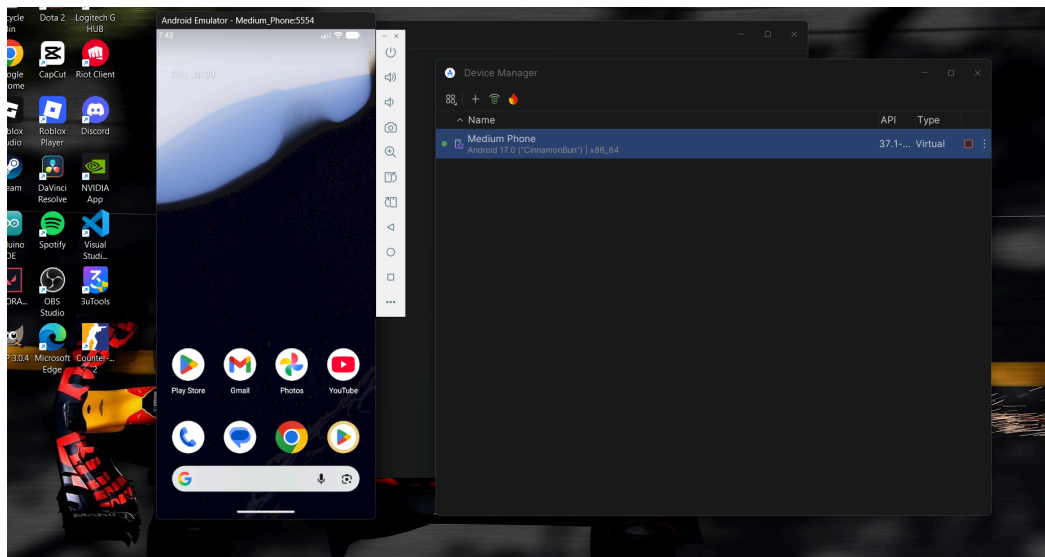

Flag 5 – Build Your Virtual Device

Objective: Create your first Android Emulator (AVD).

Screenshot:

- Device Manager
- Your newly created virtual device

- Emulator successfully

booted

🚩 Flag 6 – Forge Your Project

Objective: Create your first Flutter project.

Run:

```
flutter create my_first_flutter_app
```

Screenshot:

- Successful creation of project

```
PS C:\Users\dominic> flutter create my_first_flutter_app
Creating project my_first_flutter_app ...
Resolving dependencies in 'my_first_flutter_app' ...
Downloading packages ...
Got dependencies in 'my_first_flutter_app'.
Wrote 131 files.

All done!
You can find general documentation for Flutter at: https://docs.flutter.dev/
Detailed API documentation is available at: https://api.flutter.dev/
If you prefer video documentation, consider: https://www.youtube.com/c/flutterdev

In order to run your application, type:

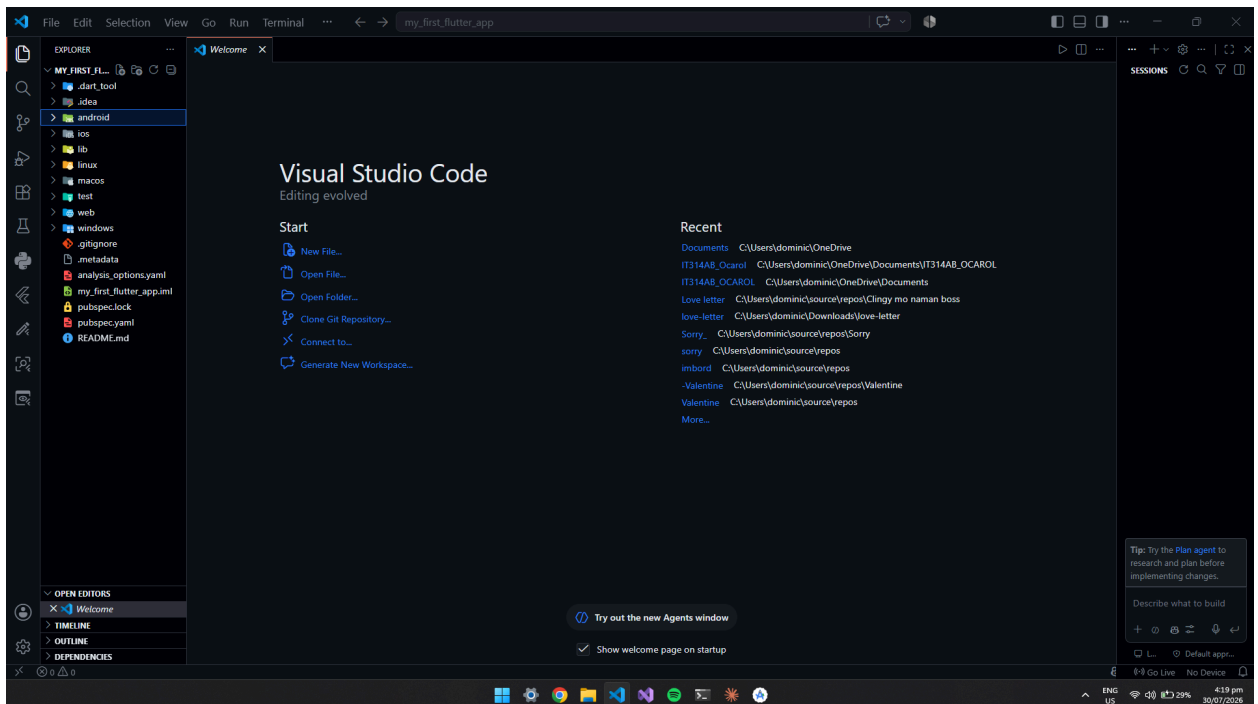

$ cd my_first_flutter_app
$ flutter run
```

🚩 Flag 7 – Unlock the Workspace

Objective: Open the project in VS Code.

Screenshot:

- Your project opened in VS Code

🚩 Flag 8 – Launch

Objective: Run your Flutter application.

Run:

flutter run

Screenshot:

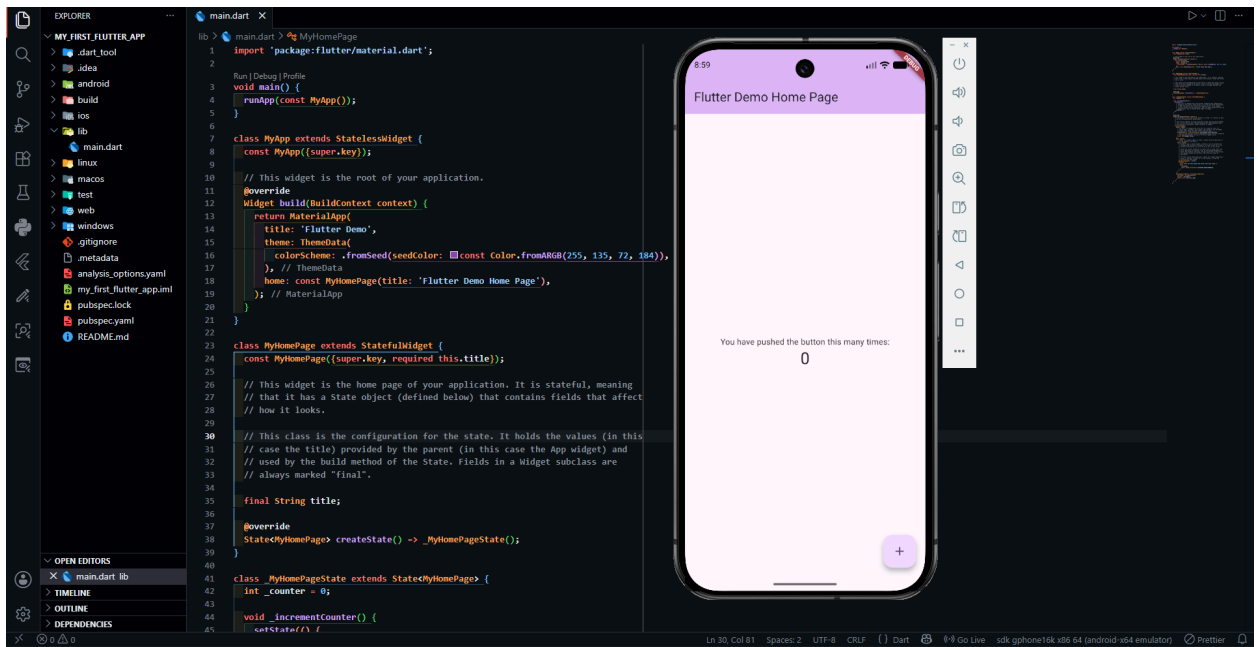

- Terminal

```
PS C:\Users\dominic\my_first_flutter_app> code .
PS C:\Users\dominic\my_first_flutter_app> flutter run
Connected devices:
Windows (desktop) • windows • windows-x64 • Microsoft Windows [Version 10.0.26200.8875]
Chrome (web) • chrome • web-javascript • Google Chrome 150.0.7871.187
Edge (web) • edge • web-javascript • Microsoft Edge 150.0.4078.105
[1]: Windows (windows)
[2]: Chrome (chrome)
[3]: Edge (edge)
Please choose one (or "q" to quit): 2
Launching lib\main.dart on Chrome in debug mode...
Waiting for connection from debug service on Chrome... 20.6s

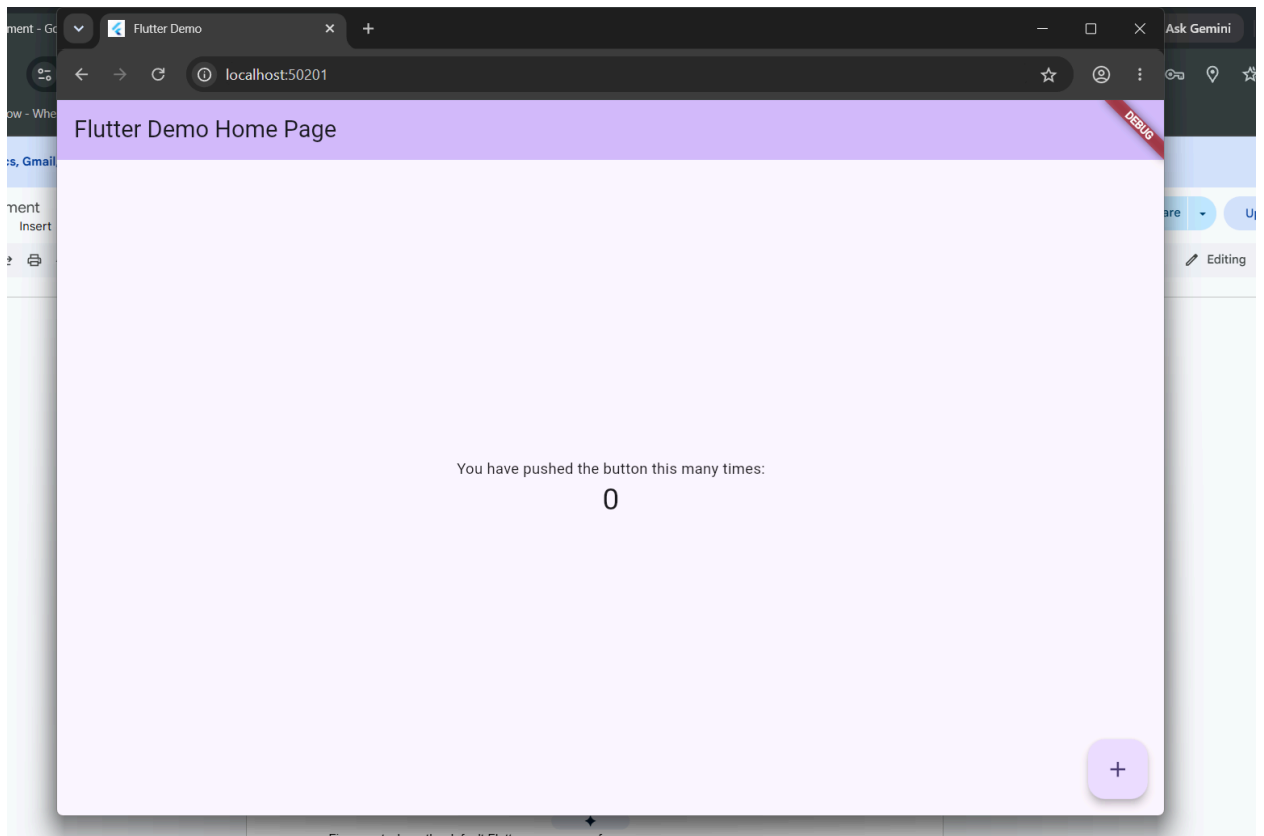

Flutter run key commands.
r Hot reload. 🍌🍌🍌
R Hot restart.
h List all available interactive commands.
d Detach (terminate "flutter run" but leave application running).
c Clear the screen
q Quit (terminate the application on the device).

This app is linked to the debug service: ws://127.0.0.1:64600/TwYZ9FHKi88=ws
Debug service listening on ws://127.0.0.1:64600/TwYZ9FHKi88=ws
A Dart VM Service on Chrome is available at: http://127.0.0.1:64600/TwYZ9FHKi88=

Starting application from main method in: org-dartlang-app:/web_entrypoint.dart.
```

- Emulator running

- Default Flutter app

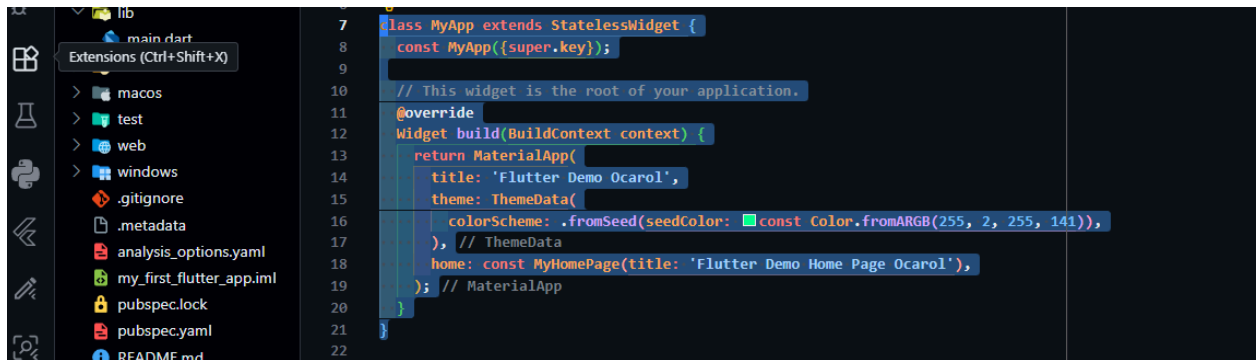

🚩 Flag 9 – Find the Entry Point

Figure out where the default Flutter page comes from.

Screenshot:

- The location of the file where the default page is from (the one showing on the emulator)

```
7 class MyApp extends StatelessWidget {  
8   const MyApp({super.key});  
9  
10  // This widget is the root of your application.  
11  @override  
12  Widget build(BuildContext context) {  
13    return MaterialApp(  
14      title: 'Flutter Demo Ocarol',  
15      theme: ThemeData(  
16        colorScheme: .fromSeed(seedColor: const Color.fromARGB(255, 2, 255, 141)),  
17      ), // ThemeData  
18      home: const MyHomePage(title: 'Flutter Demo Home Page Ocarol'),  
19    ); // MaterialApp  
20  }  
21  
22 }
```

🚩 Flag 10 – Claim Your App

Replace the default screen with:

- Full Name
- Course & Section
- "My First Flutter Application"
- Today's Date

Screenshot:

- Your updated content of the code

```

7 class MyApp extends StatelessWidget {
8   const MyApp({super.key});
9
10  // This widget is the root of your application.
11  @override
12  Widget build(BuildContext context) {
13    return MaterialApp(
14      title: 'My First Flutter Application',
15      theme: ThemeData(
16        colorScheme: .fromSeed(seedColor: const Color.fromARGB(255, 2, 255, 141)),
17      ), // ThemeData
18      home: const MyHomePage(title: 'My First Flutter Application'),
19    ); // MaterialApp
20  }
21
22

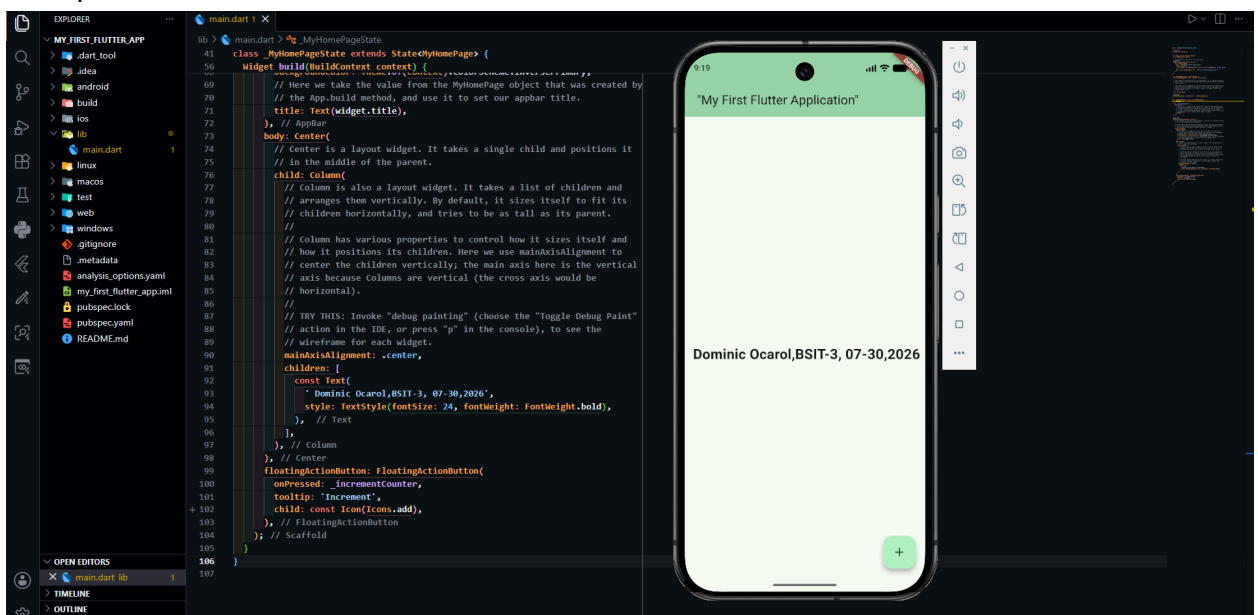

```

```

mainAxisAlignment: .center,
children: [
  const Text(
    'Dominic Ocarol,BSIT-3, 07-30,2026',
    style: TextStyle(fontSize: 24, fontWeight: FontWeight.bold),
  ), // Text

```

- The updated UI

🚩 Flag 11 – Personalize It

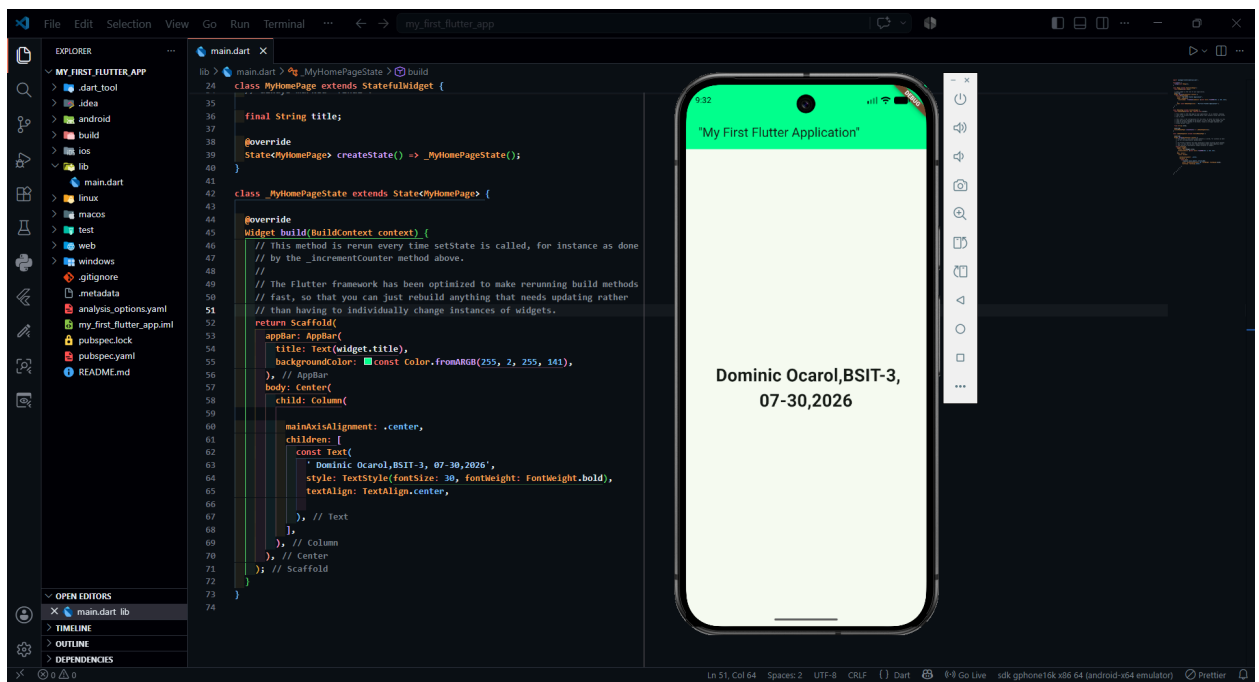

Research and implement at least **three** visual changes.

Examples:

- Change the background colour.
- Change the text colour.
- Centre the content.
- Increase font size.
- Add a border or rounded card.
- Change the font.
- Add an emoji or icon.

Screenshot:

- The code changed for personalizing
- The updated UI

🚩 Flag 12 – Add an Image

Research how to:

- Create an **assets** folder
- Register assets
- Display an image

Screenshot:

- The steps it took to add an image
- Step one: go to google and search an image that you want to put on your mobile app and download the image
- Step two: create an assets/images folder and put your downloaded image from google
- Step three: go to pubspec.yaml and add this line to the assets:
 - assets/images/batman.jpg
- Step four go back to your main.dart and add this line to format your image
- That's all
- The updated UI
